

Ikwuka Okoye

Backend Engineer — Python & Go
ikwukao@proton.me | github.com/ikwukao | Remote · GMT+1

PROFESSIONAL SUMMARY

Backend Engineer with a strong foundation in Python, Go, APIs, Linux systems, automation, and cloud infrastructure. Experienced in building security-focused tooling, automation pipelines, and scalable backend solutions with a strong emphasis on reliability and performance. Combines hands-on cybersecurity operations experience with backend engineering practices to develop efficient, production-oriented systems. Currently advancing expertise through intensive backend engineering and systems development training.

TECHNICAL SKILLS

Languages	Python, Go, Bash, SQL, JavaScript, PowerShell, C/C++
Backend	FastAPI, Flask, REST APIs, API Security, JSON, YAML
Infrastructure	Linux, Docker, Git/GitHub, CI/CD Fundamentals
Cloud	AWS, Azure, GCP
Databases	PostgreSQL, SQLite, NoSQL Concepts
Security & Tooling	Automation Scripting, Log Parsing, SIEM Pipelines, VirusTotal & Shodan APIs

PROJECTS

Phishing Analysis Toolkit

- Developed a Python CLI toolkit that automates email header analysis, URL defanging, and IOC lookups through VirusTotal and Shodan APIs, reducing analyst triage time by approximately 60%.

Endpoint Hardening Dashboard

- Built a Python-based reporting dashboard for tracking CIS benchmark remediation status across Windows Server and Ubuntu systems.

SOC Home Lab — SIEM Pipeline

- Designed a full log ingestion and monitoring pipeline using Security Onion and the ELK Stack, including custom Python scripts for syslog parsing and detection rule creation.

IR Playbook Repository

- Created structured incident response playbooks hosted on GitHub and automated runbook generation using Python templating scripts.

PROFESSIONAL EXPERIENCE

Information Security & Knowledge Officer — Enyi & AI Co. Ltd.

2026 – Present

- Developed Python and Bash automation scripts for log parsing, IOC extraction, and API integrations, reducing manual operational workload by approximately 40%.
- Integrated VirusTotal and Shodan REST APIs into internal tooling with authentication, pagination, and robust error handling.
- Automated cloud IAM audits and endpoint configuration checks using Python-generated JSON and CSV reporting pipelines.
- Conducted vulnerability assessments across 50+ assets and prioritized remediation using CVSS-based analysis.
- Produced technical documentation, operational runbooks, and automated incident timeline generation scripts.

Technical Support Specialist — Digital Brains ICT Academy

2022 – 2024

- Automated user onboarding and offboarding workflows for over 50 monthly accounts while maintaining access-control compliance.
- Authored 40+ technical knowledge-base articles and operational runbooks, improving issue resolution efficiency.
- Managed high-volume SaaS and network support requests while maintaining 95% SLA compliance.

CERTIFICATIONS

- ISC2 Certified in Cybersecurity (CC)
- Google Cybersecurity Professional Certificate
- Fortinet Certified Fundamentals in Cybersecurity

EDUCATION

B.Sc. Computer Science — University of the People
